

IN THE CLAIMS:

1. (Currently Amended) A method for presenting at least a part of a page, comprising:
at least partially dividing at least one page into a plurality of areas,
determining ~~at least one area~~which areas of said plurality of areas ~~to~~shall be
made ~~an active area~~areas and which areas shall be made non-active areas,
making said ~~at least one determined area an~~areas which have been determined
to be made active active ~~area~~areas,
presenting said ~~plurality of~~active areas and said non-active areas in a first
representation, and
in response to a user operation on at least one of said ~~at least one active~~
~~area~~areas, presenting said at least one ~~of said at least one active~~ ~~area~~areas in a second
representation.
2. (Currently Amended) The method according to claim 1, wherein in said user
operation, at least one of said ~~at least one active~~ areas is selected, and wherein at least
said selected area is presented in said second representation.
3. (Original) The method according to claim 1, wherein at least two areas of said
plurality of areas are made active areas.
4. (Original) The method according to claim 1, wherein said at least partial division of
said at least one page into said plurality of areas is based on a structure of at least a
part of said at least one page.
5. (Original) The method according to claim 1, wherein said at least partial division of
said at least one page into said plurality of areas is based on a sectioning algorithm.
6. (Original) The method according to claim 1, wherein in said first representation, at
least one area of said plurality of areas is scaled to a size that is smaller than the

original size of said respective area.

7. (Original) The method according to claim 1, wherein in said first representation, at least one area of said plurality of areas is cropped.

8. (Original) The method according to claim 1, wherein in said first representation, at least one area of said plurality of areas is indicated by an icon.

9. (Original) The method according to claim 1, wherein areas of said plurality of areas with a size that is above a size threshold, or that contain an amount of information that is above an information threshold are made active areas, or both.

10. (Currently Amended) The method according to claim 1, wherein at least one of said ~~at least one~~ active areas is automatically focused, or selected according to a selection criterion, or both.

11. (Original) The method according to claim 1, wherein in said second representation, said at least one active area is scaled to a size that is larger than its size in said first representation.

12. (Original) The method according to claim 1, wherein within at least one of said areas presented in said first representation, elements can be directly selected by a user.

13. (Currently Amended) The method according to claim 1, wherein said determining ~~of said at least one area~~ which areas of said plurality of areas ~~to~~ shall be made ~~an~~ active ~~area~~ areas and which areas shall be made non-active areas is performed automatically.

14. (Currently Amended) A computer-readable medium having a computer program stored thereon, the computer program comprising:

instructions operable to cause a processor to at least partially divide at least one page into a plurality of areas;

instructions operable to cause a processor to determine ~~at least one area~~which areas of said plurality of areas ~~to~~shall be made ~~an active area~~areas and which shall be made non-active areas;

instructions operable to cause a processor to make said ~~at least one determined area~~areas which have been determined to be made active active areas;

instructions operable to cause a processor to present said ~~plurality of~~active areas and said non-active areas in a first representation; and

instructions operable to cause a processor, in response to a user operation on at least one of said ~~at least one active area~~areas, to present said at least one ~~of said at least one active area~~area in a second representation.

15. (Currently Amended) A device for presenting at least a part of a page, ~~comprising said device configured~~

~~means for~~to at least partially ~~dividing~~divide at least one page into a plurality of areas;

~~means for determining at least one area~~to determine which areas of said plurality of areas ~~to~~shall be made ~~an active area~~areas and which areas shall be made non-active areas;

~~means for making said at least one determined area~~to make said areas which have been determined to be made active active areas;

~~means for presenting to present~~ said ~~plurality of~~active areas and said non-active areas in a first representation; and

~~means for presenting to present~~ at least one of said ~~at least one active areas~~ in a second representation in response to a user operation on said at least one of said active areas.

16. (Currently Amended) The device according to claim 15, wherein said areas are presented on a display module, or on a display of said device comprising a portable electronic device.

17. (Currently Amended) A system for presenting at least a part of a page,

~~comprising;configured~~

~~means for~~to at least partially ~~dividing~~divide at least one page into a plurality of areas;

~~means for determining at least one area~~to determine which areas of said plurality of areas ~~to~~shall be made ~~an active area~~areas and which shall be made non-active areas;

~~means for making~~to make said ~~at least one determined area~~areas which have been determined to be made active ~~active area~~areas;

~~means for presenting~~to present said ~~plurality of~~active areas and said non-active areas in a first representation, and

~~means for presenting~~to present at least one of said ~~at least one active~~ areas in a second representation in response to a user operation on said at least one of said active ~~area~~areas.

18. (Currently Amended) The system according to claim 17, wherein said ~~determining of said at least one area~~ of said plurality of areas ~~to~~shall be made ~~an active area~~areas is performedand which areas shall be made non-active automatically.

19. (Currently Amended) The device according to claim 15, wherein said ~~determining of said at least one area~~device is configured to determine which areas of said plurality of areas ~~to~~shall be made ~~an active area~~areas ~~is performed~~and which areas shall be made non-active automatically.
